PROFESSIONAL SUMMARY

Computer Science Engineering student specializing in Cyber Security with hands-on experience building backend and full-stack applications using **Java**, **Spring Boot**, Python, Flask, and SQL. Experienced in developing **REST APIs**, database-driven applications, authentication and authorization workflows, transactional business logic, and automation tools. Strong foundation in **Data Structures and Algorithms**, **Object-Oriented Programming**, **DBMS**, **networking**, and software development.

EDUCATION

Dr. N.G.P. Institute of Technology	2023 – 2027
Bachelor of Engineering in Computer Science and Engineering (Cyber Security)	CGPA: 8.04
Cambridge Matriculation Higher Secondary School	2021 – 2022
Higher Secondary Education	87.5%

TECHNICAL SKILLS

Programming: Java, Python

Core Computer Science: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks

Backend: Spring Boot, REST APIs, Flask, JPA, Hibernate, Backend Development, API Integration

Databases: SQL, PostgreSQL, MySQL

Frontend: React, HTML, CSS, JavaScript

Development Tools: Git, GitHub, Postman, Swagger/OpenAPI, Maven

Security & Networking: Cybersecurity, Threat Intelligence, OSINT, Network Security, TCP/IP, DNS, HTTP, HTTPS

Deployment & Systems: Docker, Linux, Cloud Deployment Concepts

PROJECTS

ServiceDesk Pro — Enterprise Service & Support Management Platform 2026

- Developed a **Java Spring Boot full-stack application** for managing customers, support agents, administrators, service tickets, assignments, comments, and ticket status workflows.
- Implemented **RESTful APIs** using a layered **Controller–Service–Repository architecture** with Spring Data JPA and Hibernate, backed by PostgreSQL and transactional business operations.
- Designed **role-based authentication and authorization with JWT**, request validation, global exception handling, and controlled access to ticket and administrative operations.
- Implemented **ticket lifecycle management** with assignment, priority handling, status history, comments, search, filtering, sorting, and pagination using relational database entities and relationships.

SmartStock — Inventory & Order Management System 2026

- Developed a **Java Spring Boot** inventory and order management system with **REST APIs** for products, suppliers, customers, inventory, and order workflows.
- Implemented **transactional order processing** with **stock validation** and **Order–OrderItem relationships** to maintain inventory consistency during order creation and cancellation.
- Designed **transactional order processing** with stock validation, Order–OrderItem relationships, order status management, and cancellation workflows.

- Implemented **request validation, exception handling, search, filtering, pagination, and sorting** for efficient product and order management.

Asset-Centric Threat Intelligence Automation Tool

2026

- Engineered a **Python-based application** to analyze **100+ security indicators** across domains, IPs, and URLs.
- Integrated **5+ external OSINT threat feeds and reputation databases** to automate indicator enrichment, reputation analysis, and security assessment.
- Implemented **DNS intelligence analysis, IP reputation scoring, and port exposure monitoring** for automated asset-level security assessment.
- Developed a **Flask-based dashboard** for visualizing threat intelligence results and generating intelligence reports.

TamperTrace — Web Integrity Monitoring System

2026

- Developed a **modular Flask-based web integrity monitoring platform** to detect unauthorized website modifications using cryptographic hash verification.
- Implemented **scheduled monitoring, browser-based scanning, content comparison, tamper detection, alerting, backup, and restoration workflows**.
- Structured the application using separated **routes, services, repositories/database components, and background workers** to improve maintainability and separation of concerns.
- Built a **web dashboard** for monitoring scan results, detected changes, alerts, and website recovery operations.

INTERNSHIP EXPERIENCE

Cyber Crime Internship — Tamil Nadu Cyber Crime Wing

45 Days — 2025

- Engineered **FundTrail Analysis Tool**, a Flask–MySQL backend application for managing and analyzing financial fraud cases across **5+ active investigations**, with complaint tracking, officer management, and analytics modules.
- Processed and analyzed **1,000+ financial records** to identify suspicious transaction patterns and developed fund-flow visualizations for investigation analysis.
- Implemented **Python-based Excel parsing and transaction normalization** to transform financial data into structured records for database-driven analysis.

Cybersecurity Intern — Hackup Technology

15 Days — 2025

- Performed vulnerability assessments on test web applications using **OWASP Top 10** attack scenarios and analyzed **500+ network packets** using Wireshark to identify abnormal communication patterns.
- Documented **15+ security findings**, simulated attack scenarios, and prepared structured technical reports with remediation recommendations.

ACHIEVEMENTS

- **Best Project Identifier Award** — Domain Security Analysis, Intra-college Project Expo, 2026
- **Best Mini Project Award** — DNS Record Finder Cybersecurity Tool, 2025
- Presented research on “**Ransomware Attacks on Healthcare Organizations: Survey of Incidence and Impact**” at **IEEE RICE-2025 Conference**, Hyderabad, and an international engineering conference in UAE.
